

~ ISPvoice 1.20 ~

Thank you for using this freeware.

Is it completely free for commercial use also, but without any warranty!

You can change the code as you want.

Any updates, translation and feedback send to: max.samael@gmail.com

Support is at my email, but only with my free time: max.samael@gmail.com

Requirements

- PHP 5 >= PHP 5.2.0 (used filter_var in userdata.php line: 63)
- MySQL
- Wordpress >= 3.1.2 (recommended)
- Web invoice plugin for wordpress (recommended, you can edit class/addto_webinvoice.php to add your own service, link: <http://wordpress.org/extend/plugins/web-invoice/>)
- Subreg.cz account (is free, voluntarily, link: <https://subreg.cz/en/login/register/>)
- if you use google money: JSON
- if you use eu central bank money: simpleXML
- if you use subreg SOAP must be accepted

Installation

1. Download and install Wordpress
2. Extract files to wordpress directory, ispvoice folder
3. Go to config folder and set the wordpress.conf.php file
 1. Path to wordpress in typical installation is it ../
4. Open db.conf.php
 1. Edit columns to wordpress database
5. Open db_isp.conf.php
 1. Edit columns to ISPcp Omega database
6. Open config.conf.php
 1. Edit all settings as you want
7. Add to wordpress database file: sql/ispvoice_120.sql
8. Open MySQL editor (phpmyadmin) and edit database settings at ispvoice_settings column
You can find:

1. *domain* as domain to can be registered
2. *domain_period* as period for domain registration
3. *identifier* as id from last invoice and value with current year (2011 is 11) (extremely needed, don't edit this value)
4. *invoice* as invoice type for buyer
5. *payment_period* as period for the payments
9. Test your installation with navigation to install directory and file index.php

[If you have problem with installation contact me thru e-mail](#)

Settings and customisation

- If you are using whois script, define whois servers for your TLDs, open the class/whois.php and add your servers in line 77 and above.
- Create your own language pack situated in language/
- Create your own template in tpl/
- Create plugin in plugins/

[If you have usefull things share it with others at facebook or send it to e-mail and it can be in next release.](#)
