How to translate files

- The translation files are located in language/ folder

- Folder with name en means english translation

- Create your translation folder with 2-sign shortcode

- The translation file has same name as module

- The strings are saved inside the files in Array $sitelang or $lang. Sitelang is for all the page saved in _all.php and lang is for current module only.

- The format in array is "english original"=>"translated char"

- If some chars isn't listed for translation, add function $lang->tr("string")

  or $sitelang->tr("string") in module (template) and send the module for update.

- If you want send the translation to developement.

- Default translation file is in folder doc/translation/
